DIEGO M. TAVELLI

Full Stack Software Engineer | Node.js, NestJS, React, TypeScript

Buenos Aires, Argentina · diegotavelli@gmail.com · +54 911 2774-5511
linkedin.com/in/diegotavelli · github.com/diegotavelli

SUMMARY

Full Stack Software Engineer with 4 years of production experience, including 3.5 years building software for banking clients in Colombia, Panama and Puerto Rico. Backend development with Node.js and NestJS (REST APIs, microservices with RabbitMQ, PostgreSQL) and frontend development with React, on Docker, Kubernetes and Azure. Strong in troubleshooting production issues, database performance, application security and automated testing. Client-facing, and mentored junior developers.

SKILLS

- **Languages:** TypeScript, JavaScript, SQL, HTML, CSS
- **Backend:** Node.js, NestJS, REST APIs, microservices, RabbitMQ, WebSockets (Socket.io)
- **Frontend:** React, Next.js, Astro, Tailwind CSS, Adobe AEM Forms, Angular (production fixes)
- **Databases:** PostgreSQL, MongoDB, Redis, TypeORM, Drizzle ORM
- **Cloud & DevOps:** Docker, Kubernetes (kubectl, log tracing), Azure, Azure DevOps CI/CD, AWS (EC2, S3, CloudWatch), Cloudflare
- **Testing & Quality:** Vitest, Jest, Node.js test runner, SonarQube
- **Security:** pentest remediation (CWE), Content Security Policy, secure session handling, Web Crypto API

PROFESSIONAL EXPERIENCE

Full Stack Developer (Freelance)
Client: IBAgency (ibagency.com), foreign trade company, Buenos Aires · Sole developer, from requirements to production
Aug 2026 – Present

- Built the client's website and an admin panel used by 4 non-technical staff to publish articles and case studies: user roles, live preview, publishing through GitHub commits that trigger the site build, and a publishing log.
- Cloudflare architecture: static site and admin panel on separate Workers, D1 with Drizzle ORM, Better Auth with Cloudflare Access, CSP and security headers. Migrated DNS from GoDaddy to Cloudflare while preserving the client's email and ERP.
- Raised desktop Lighthouse scores from 88 to 99 (performance) and from 82 to 100 (SEO) versus the legacy site.

Full Stack Developer
Moveo Ventures (software consultancy) · Clients: Bancolombia, Banistmo, Unibank
Dec 2022 – Jun 2026

Delivered 4 production banking projects in Scrum teams of 2–3 developers, from design to deployment, under financial compliance requirements. Technical liaison with client stakeholders.

- **Critical incident, biometric verification (3 countries):** traced an authentication race condition where a Socket.io connection opened before login, breaking account openings. Shipped a fix in under an hour against a 4-hour SLA, then a permanent fix (connection gated on auth state, with listener cleanup), extended to customer registration.
- **Bulk upload:** 2,000+ row Excel uploads froze the backend (one query per row on a ~10-connection pool). Rewrote it in batches of 1,000 with one existence query each, cutting queries from 2,000+ to 2, and replaced a table wipe with per-user updates.
- **Application security, 2023–2026:** remediated pentest findings (Fluid Attacks, CWE-mapped): CSP with nonces, CryptoJS to Web Crypto API, session moved to cookies (CWE-922), log injection prevention (CWE-117), IDOR fix and dependency patching.
- **AEM forms in React:** integrated Adobe AEM Adaptive Forms using Adobe's official library and a custom component registry, compatible with another team's Angular implementation. Worked independently.
- **Microservices:** extended an API gateway in front of 7 NestJS services over RabbitMQ, adding service connections and EventEmitters wired to endpoints.
- **Testing:** wrote and maintained Vitest tests in three production projects (plus Jest); shipped via Azure DevOps CI/CD.
- **Mentoring:** mentored 3 junior developers who joined my projects, starting in my first year.
